#### 第8章 a:向量的基本概念

数学系 梁卓滨

2016-2017 **学年** II

### 提要

- 向量的基本概念
  - 向量的线性运算
  - 向量的长度
  - 向量间的夹角
  - 向量的投影
- 向量的坐标表示、计算
  - 计算向量的线性运算、长度、夹角、投影
- 向量的数量积
- 向量的向量积

解

$$0 = (\overrightarrow{a} + \lambda \overrightarrow{b}) \cdot (\overrightarrow{a} - \lambda \overrightarrow{b})$$

$$= \overrightarrow{a} \cdot \overrightarrow{a} + \overrightarrow{a} \cdot (-\lambda \overrightarrow{b}) + (\lambda \overrightarrow{b}) \cdot \overrightarrow{a} + (\lambda \overrightarrow{b}) \cdot (-\lambda \overrightarrow{b})$$

$$= \overrightarrow{a} \cdot \overrightarrow{a} - \lambda \overrightarrow{a} \cdot \overrightarrow{b} + \lambda \overrightarrow{b} \cdot \overrightarrow{a} - \lambda^{2} \overrightarrow{b} \cdot \overrightarrow{b}$$

$$= |\overrightarrow{a}|^{2} - \lambda^{2} |\overrightarrow{b}|^{2}$$

所以

$$\lambda^2 = \frac{|\overrightarrow{\alpha}|^2}{|\overrightarrow{b}|^2}$$

$$\lambda = \underline{\hspace{1cm}}$$

解

$$0 = (\overrightarrow{a} + \lambda \overrightarrow{b}) \cdot (\overrightarrow{a} - \lambda \overrightarrow{b})$$

$$= \overrightarrow{a} \cdot \overrightarrow{a} + \overrightarrow{a} \cdot (-\lambda \overrightarrow{b}) + (\lambda \overrightarrow{b}) \cdot \overrightarrow{a} + (\lambda \overrightarrow{b}) \cdot (-\lambda \overrightarrow{b})$$

$$= \overrightarrow{a} \cdot \overrightarrow{a} - \lambda \overrightarrow{a} \cdot \overrightarrow{b} + \lambda \overrightarrow{b} \cdot \overrightarrow{a} - \lambda^{2} \overrightarrow{b} \cdot \overrightarrow{b}$$

$$= |\overrightarrow{a}|^{2} - \lambda^{2} |\overrightarrow{b}|^{2}$$

所以

$$\lambda^2 = \frac{|\vec{\alpha}|^2}{|\vec{b}|^2} = \frac{2^2}{4^2} = \frac{1}{4}$$

$$0 = (\overrightarrow{a} + \lambda \overrightarrow{b}) \cdot (\overrightarrow{a} - \lambda \overrightarrow{b})$$

$$= \overrightarrow{a} \cdot \overrightarrow{a} + \overrightarrow{a} \cdot (-\lambda \overrightarrow{b}) + (\lambda \overrightarrow{b}) \cdot \overrightarrow{a} + (\lambda \overrightarrow{b}) \cdot (-\lambda \overrightarrow{b})$$

$$= \overrightarrow{a} \cdot \overrightarrow{a} - \lambda \overrightarrow{a} \cdot \overrightarrow{b} + \lambda \overrightarrow{b} \cdot \overrightarrow{a} - \lambda^{2} \overrightarrow{b} \cdot \overrightarrow{b}$$

$$= |\overrightarrow{a}|^{2} - \lambda^{2} |\overrightarrow{b}|^{2}$$

所以

$$\lambda^2 = \frac{|\overrightarrow{a}|^2}{|\overrightarrow{b}|^2} = \frac{2^2}{4^2} = \frac{1}{4} \quad \Rightarrow \quad \lambda = \pm \frac{1}{2}.$$
