例已知 $|\overrightarrow{a}|=2$, $|\overrightarrow{b}|=4$, 若 $\overrightarrow{a}+\lambda \overrightarrow{b}$ 与 $\overrightarrow{a}-\lambda \overrightarrow{b}$ 互相垂直,则

$$\lambda = \underline{\hspace{1cm}}$$

$$0 = (\overrightarrow{a} + \lambda \overrightarrow{b}) \cdot (\overrightarrow{a} - \lambda \overrightarrow{b})$$

$$= \overrightarrow{a} \cdot \overrightarrow{a} + \overrightarrow{a} \cdot (-\lambda \overrightarrow{b}) + (\lambda \overrightarrow{b}) \cdot \overrightarrow{a} + (\lambda \overrightarrow{b}) \cdot (-\lambda \overrightarrow{b})$$

例已知 $|\overrightarrow{a}|=2$, $|\overrightarrow{b}|=4$, 若 $\overrightarrow{a}+\lambda\overrightarrow{b}$ 与 $\overrightarrow{a}-\lambda\overrightarrow{b}$ 互相垂直,则

$$0 = (\overrightarrow{a} + \lambda \overrightarrow{b}) \cdot (\overrightarrow{a} - \lambda \overrightarrow{b})$$

$$= \overrightarrow{a} \cdot \overrightarrow{a} - \lambda \overrightarrow{a} \cdot \overrightarrow{b} + \lambda \overrightarrow{b} \cdot \overrightarrow{a} - \lambda^{2} \overrightarrow{b} \cdot \overrightarrow{b}$$

$$= |\overrightarrow{a}|^{2} - \lambda^{2} |\overrightarrow{b}|^{2}$$

例已知 $|\overrightarrow{a}|=2$, $|\overrightarrow{b}|=4$, 若 $\overrightarrow{a}+\lambda\overrightarrow{b}$ 与 $\overrightarrow{a}-\lambda\overrightarrow{b}$ 互相垂直,则 $\lambda=$

$$0 = (\overrightarrow{a} + \lambda \overrightarrow{b}) \cdot (\overrightarrow{a} - \lambda \overrightarrow{b})$$

$$= |\overrightarrow{a}|^{2} - \lambda^{2} |\overrightarrow{b}|^{2}$$

所以

$$\lambda^2 = \frac{|\overrightarrow{a}|^2}{|\overrightarrow{b}|^2}$$

例已知 $|\overrightarrow{a}|=2$, $|\overrightarrow{b}|=4$, 若 $\overrightarrow{a}+\lambda\overrightarrow{b}$ 与 $\overrightarrow{a}-\lambda\overrightarrow{b}$ 互相垂直,则 $\lambda=$

$$= \overrightarrow{a} \cdot \overrightarrow{a} - \lambda \overrightarrow{a} \cdot \overrightarrow{b} + \lambda \overrightarrow{b} \cdot \overrightarrow{a} - \lambda^{2} \overrightarrow{b} \cdot \overrightarrow{b}$$

$$= |\overrightarrow{a}|^{2} - \lambda^{2} |\overrightarrow{b}|^{2}$$

所以

$$\lambda^2 = \frac{|\vec{a}|^2}{|\vec{b}|^2} = \frac{2^2}{4^2} = \frac{1}{4}$$

例已知 $|\overrightarrow{a}| = 2$, $|\overrightarrow{b}| = 4$, 若 $\overrightarrow{a} + \lambda \overrightarrow{b}$ 与 $\overrightarrow{a} - \lambda \overrightarrow{b}$ 互相垂直,则

$$\lambda = \underline{\hspace{1cm}}$$
.

$$0 = (\overrightarrow{a} + \lambda \overrightarrow{b}) \cdot (\overrightarrow{a} - \lambda \overrightarrow{b})$$

$$= \overrightarrow{a} \cdot \overrightarrow{a} + \overrightarrow{a} \cdot (-\lambda \overrightarrow{b}) + (\lambda \overrightarrow{b}) \cdot \overrightarrow{a} + (\lambda \overrightarrow{b}) \cdot (-\lambda \overrightarrow{b})$$

所以

$$\lambda^2 = \frac{|\overrightarrow{a}|^2}{|\overrightarrow{b}|^2} = \frac{2^2}{4^2} = \frac{1}{4} \implies \lambda = \pm \frac{1}{2}.$$
