## 第 08 周作业解答

练习 1. 画出积分区域, 并计算二重积分:

- 1.  $\iint_D x \sqrt{y} d\sigma$ , 其中 D 是由两条抛物线  $y = \sqrt{x}$  和  $y = x^2$  所围成的闭区域;
- 2.  $\iint_D (x^2 + y^2 x) d\sigma$ , 其中 D 是由直线 y = 2, y = x 和 y = 2x 所围成的闭区域;

**解** 1. 将 D 视为 X 型区域:  $D = \{(x, y) | x^2 \le y \le \sqrt{x}, 0 \le x \le 1\}$ 。所以

$$\iint_{D} x\sqrt{y}d\sigma = \int_{0}^{1} \left[ \int_{x^{2}}^{\sqrt{x}} x\sqrt{y}dy \right] dx = \int_{0}^{1} \left[ \frac{2}{3}xy^{\frac{3}{2}} \Big|_{x^{2}}^{\sqrt{x}} \right] dx = \int_{0}^{1} \left[ \frac{2}{3}x^{\frac{7}{4}} - \frac{2}{3}x^{4} \right] dx \\
= \left( \frac{8}{33}x^{\frac{11}{4}} - \frac{2}{15}x^{5} \right) \Big|_{0}^{1} = \frac{8}{33} - \frac{2}{15} = \frac{6}{55}.$$

也可以将 D 视为 Y 型区域:  $D = \{(x, y) | y^2 \le x \le \sqrt{y}, 0 \le y \le 1\}$ 。所以

$$\iint_{D} x\sqrt{y}d\sigma = \int_{0}^{1} \left[ \int_{y^{2}}^{\sqrt{y}} x\sqrt{y}dx \right] dy = \int_{0}^{1} \left[ \frac{1}{2}x^{2}y^{\frac{1}{2}} \Big|_{y^{2}}^{\sqrt{y}} \right] dy = \int_{0}^{1} \left[ \frac{1}{2}y^{\frac{3}{2}} - \frac{1}{2}x^{\frac{9}{2}} \right] dy \\
= \left( \frac{1}{5}x^{\frac{5}{2}} - \frac{1}{11}x^{\frac{11}{2}} \right) \Big|_{0}^{1} = \frac{1}{5} - \frac{1}{11} = \frac{6}{55}.$$

2. 将 D 视为 Y 型区域:  $D = \{(x, y) | \frac{1}{2}y \le x \le y, 0 \le y \le 2\}$ 。所以

$$\iint_{D} (x^{2} + y^{2} - x) d\sigma = \int_{0}^{2} \left[ \int_{\frac{1}{2}y}^{y} (x^{2} + y^{2} - x) dx \right] dy = \int_{0}^{2} \left[ \frac{1}{3} x^{3} + xy^{2} - \frac{1}{2} x^{2} \Big|_{\frac{1}{2}y}^{y} \right] dy = \int_{0}^{1} \left[ \frac{19}{24} y^{3} - \frac{3}{8} y^{2} \right] dy \\
= \left( \frac{19}{96} y^{4} - \frac{1}{8} y^{3} \right) \Big|_{0}^{2} = \frac{19}{6} - 1 = \frac{13}{6}.$$

练习 2. 画出积分区域, 并计算二重积分:

- 1.  $\iint_D x \cos(x+y) d\sigma$ , 其中 D 是顶点分别为 (0,0),  $(\pi,0)$  和  $(\pi,\pi)$  的三角区闭区域;
- 2.  $\iint_D e^{x+y} d\sigma$ , 其中  $D = \{(x, y) | |x| \le 1, |y| \le 1\}$ .

**解** 1. 将 D 视为 Y 型区域:  $D = \{(x, y) | y \le x \le \pi, 0 \le y \le \pi\}$ 。所以

$$\iint_{D} x \cos(x+y) d\sigma = \int_{0}^{\pi} \left[ \int_{y}^{\pi} x \cos(x+y) dx \right] dy = \int_{0}^{\pi} \left[ \int_{y}^{\pi} x d \sin(x+y) \right] dy$$

$$= \int_{0}^{\pi} \left[ x \sin(x+y) \Big|_{y}^{\pi} - \int_{y}^{\pi} \sin(x+y) dx \right] dy$$

$$= \int_{0}^{\pi} \left[ \pi \sin(\pi+y) - y \sin(2y) + \cos(\pi+y) - \cos(2y) \right] dy$$

$$= \int_{0}^{\pi} \left[ -\pi \sin y - y \sin(2y) - \cos y - \cos(2y) \right] dy$$

$$= \pi \cos y \Big|_{0}^{\pi} - \sin y \Big|_{0}^{\pi} - \frac{1}{2} \sin 2y \Big|_{0}^{\pi} + \frac{1}{2} \int_{0}^{\pi} y d \cos(2y)$$

$$= -2\pi + \frac{1}{2} \left( y \cos(2y) \Big|_{0}^{\pi} - \int_{0}^{\pi} \cos(2y) dy \right)$$

$$= -2\pi + \frac{1}{2} \left( \pi - \frac{1}{2} \sin(2y) \Big|_{0}^{\pi} \right) = -\frac{3}{2}\pi.$$

也可以将 D 视为 X 型区域:  $D = \{(x, y) | 0 \le y \le x, 0 \le x \le \pi\}$ 。所以

$$\begin{split} \iint_D x \cos(x+y) d\sigma &= \int_0^\pi \left[ \int_0^x x \cos(x+y) dy \right] dx = \int_0^\pi \left[ x \sin(x+y) \Big|_0^x \right] dx = \int_0^\pi \left[ x \sin(2x) - x \sin x \right] dx \\ &= \int_0^\pi x d \left( -\frac{1}{2} \cos(2x) + \cos x \right) = x \left( -\frac{1}{2} \cos(2x) + \cos x \right) \Big|_0^\pi - \int_0^\pi \left( -\frac{1}{2} \cos(2x) + \cos x \right) dx \\ &= -\frac{3}{2} \pi - \left[ -\frac{1}{4} \sin(2x) + \sin x \right] \Big|_0^\pi = -\frac{3}{2} \pi. \end{split}$$

2.

$$\iint_D e^{x+y} d\sigma = \int_{-1}^1 \left( \int_{-1}^1 e^{x+y} dx \right) dy = \int_{-1}^1 \left( e^{x+y} \Big|_{-1}^1 \right) dy = \int_0^1 e^{1+y} - e^{-1+y} dy$$
$$= e^{1+y} - e^{-1+y} \Big|_{-1}^1 = e^2 + e^{-2} - 2.$$

**练习 3.** 计算二重积分  $\iint_D e^{x+y} d\sigma$ , 其中  $D = \{(x, y) | |x| + |y| \le 1\}$ .

 $\mathbf{W}$ 将 D 视为两个 X 型区域之并:

$$D = D_1 \cup D_2 = \{(x, y) | -x - 1 \le y \le x + 1, -1 \le x \le 0\} \cup \{(x, y) | -1 + x \le y \le 1 - x, 0 \le x \le 1\}.$$

所以

$$\begin{split} \iint_D e^{x+y} d\sigma &= \iint_{D_1} e^{x+y} d\sigma + \iint_{D_2} e^{x+y} d\sigma \\ &= \int_{-1}^0 \left[ \int_{-x-1}^{x+1} e^{x+y} dy \right] dx + \int_0^1 \left[ \int_{-1+x}^{1-x} e^{x+y} dy \right] dx \\ &= \int_{-1}^0 \left[ e^{x+y} \Big|_{-x-1}^{x+1} \right] dx + \int_0^1 \left[ e^{x+y} \Big|_{-1+x}^{1-x} \right] dx \\ &= \int_{-1}^0 \left[ e^{2x+1} - e^{-1} \right] dx + \int_0^1 \left[ e - e^{2x-1} \right] dx \\ &= \left( \frac{1}{2} e^{2x+1} - e^{-1} x \right) \Big|_{-1}^0 + \left( ex - \frac{1}{2} e^{2x-1} \right) \Big|_0^1 \\ &= \frac{1}{2} e - 0 - \frac{1}{2} e^{-1} - e^{-1} + e - \frac{1}{2} e + \frac{1}{2} e^{-1} \\ &= e - e^{-1}. \end{split}$$

也可以将 D 视为两个 Y 型区域之并:

 $D = D_1 \cup D_2 = \{(x, y) | -y - 1 \le x \le y + 1, -1 \le y \le 0\} \cup \{(x, y) | y - 1 \le x \le -y + 1, 0 \le y \le 1\}.$  所以

$$\iint_{D} e^{x+y} d\sigma = \iint_{D_{1}} e^{x+y} d\sigma + \iint_{D_{2}} e^{x+y} d\sigma 
= \int_{-1}^{0} \left[ \int_{-y-1}^{y+1} e^{x+y} dx \right] dy + \int_{0}^{1} \left[ \int_{y-1}^{-y+1} e^{x+y} dx \right] dy 
= \int_{-1}^{0} \left[ e^{x+y} \Big|_{-y-1}^{y+1} \right] dy + \int_{0}^{1} \left[ e^{x+y} \Big|_{-1+y}^{1-y} \right] dy 
= \int_{-1}^{0} \left[ e^{2y+1} - e^{-1} \right] dy + \int_{0}^{1} \left[ e - e^{2y-1} \right] dy 
= \left( \frac{1}{2} e^{2y+1} - e^{-1} y \right) \Big|_{-1}^{0} + \left( ey - \frac{1}{2} e^{2y-1} \right) \Big|_{0}^{1} 
= \frac{1}{2} e - 0 - \frac{1}{2} e^{-1} - e^{-1} + e - \frac{1}{2} e + \frac{1}{2} e^{-1} 
= e - e^{-1}.$$

练习 4. 交换二次积分  $\int_1^2 \left[ \int_{2-x}^{\sqrt{2x-x^2}} f(x,y) dy \right] dx$  的积分次序。

解 1.  $\int_1^2 \left[ \int_{2-x}^{\sqrt{2x-x^2}} f(x,y) dy \right] dx = \iint_D f(x,y) d\sigma$ ,其中  $D = \{(x,y) | 2-x \le y \le \sqrt{2x-x^2}, \ 1 \le x \le 2\}$  视为 X 型区域。

2. D 也可视为 Y 型区域:  $D = \{(x, y) | 2 - y \le x \le 1 + \sqrt{1 - y^2}, 0 \le y \le 1\}$ 。 所以

$$\int_{1}^{2} \left[ \int_{2-x}^{\sqrt{2x-x^2}} f(x,y) dy \right] dx = \iint_{D} f(x,y) d\sigma = \int_{0}^{1} \left[ \int_{2-y}^{1+\sqrt{1-y^2}} f(x,y) dx \right] dy.$$

**练习 5.** 通过交换积分次序计算二次积分  $\int_0^2 dx \int_x^2 e^{-y^2} dy$ .

解 1.  $\int_0^2 \left[ \int_x^2 e^{-y^2} dy \right] dx = \iint_D f(x,y) d\sigma$ ,其中  $D = \{(x,y) | x \le y \le 2, \ 0 \le x \le 2\}$  视为 X 型区域。 2. D 也可视为 Y 型区域:  $D = \{(x,y) | \ 0 \le x \le y, \ 0 \le y \le 2\}$ 。所以

$$\begin{split} \int_0^2 \left[ \int_x^2 e^{-y^2} dy \right] dx &= \iint_D f(x, y) d\sigma \\ &= \int_0^2 \left[ \int_0^y e^{-y^2} dx \right] dy \\ &= \int_0^2 e^{-y^2} y dy \\ &= \frac{1}{2} \int_0^2 e^{-y^2} dy^2 \\ &= \frac{1}{2} \int_0^4 e^{-u} du \\ &= -\frac{1}{2} e^{-u} \Big|_0^4 = \frac{1}{2} (1 - e^{-4}). \end{split}$$

练习 6. 计算  $\iint_D |x^2 + y^2 - 4| d\sigma$ , 其中 D 为圆盘  $x^2 + y^2 \le 16$ 。

**解**在极坐标下  $D = \{(\rho, \theta) | 0 \le \rho \le 4, 0 \le \theta \le 2\pi\}$ ,所以

$$\begin{split} \iint_D |x^2 + y^2 - 4| d\sigma &= \iint_D |\rho^2 - 4| \rho d\rho d\theta \\ &= \int_0^{2\pi} \left[ \int_0^4 |\rho^2 - 4| \rho d\rho \right] d\theta = 2\pi \left[ \int_0^4 |\rho^2 - 4| \rho d\rho \right] \\ &= 2\pi \left[ \int_0^2 |\rho^2 - 4| \rho d\rho + \int_2^4 |\rho^2 - 4| \rho d\rho \right] = 2\pi \left[ \int_0^2 (4 - \rho^2) \rho d\rho + \int_2^4 (\rho^2 - 4) \rho d\rho \right] \\ &= 2\pi \left[ \left( 2\rho^2 - \frac{1}{4}\rho^4 \right) \big|_0^2 + \left( \frac{1}{4}\rho^4 - 2\rho^2 \right) \big|_2^4 \right] = 80\pi. \end{split}$$

**练习 7.** 计算  $D=\iint_D\arctan\frac{y}{x}d\sigma$ ,其中 D 是由圆周  $x^2+y^2=4$ , $x^2+y^2=1$  及直线 y=0,y=x 所围成的在第一象限内的闭区域。

解在极坐标下  $D=\{(\rho,\,\theta)|\,1\leq\rho\leq 2,\,0\leq\theta\leq\frac{\pi}{4}\},\,\,\arctan\frac{y}{x}=\theta\,,\,\,$ 所以

$$\iint_{D} \arctan \frac{y}{x} d\sigma = \iint_{D} \theta \rho d\rho d\theta$$

$$= \int_{0}^{\frac{1}{4}\pi} \left[ \int_{1}^{2} \rho \theta d\rho \right] d\theta = \int_{0}^{\frac{1}{4}\pi} \left( \frac{1}{2} \theta \rho^{2} \right) \Big|_{1}^{2} d\theta$$

$$= \int_{0}^{\frac{1}{4}\pi} \frac{3}{2} \theta d\theta = \frac{3}{4} \theta^{2} \Big|_{0}^{\frac{1}{4}\pi} = \frac{3}{64} \pi^{2}.$$
